Inflatable Packers Meet or Exceed the Rigid Engineering Standards Demanded

By: Replacement Inflatable Packers and Elements, John Misson

Replacement Inflatable Packers and Elements Pty Ltd provide superior quality high pressure inflatable packers, essential for extreme pressure applications. They are broadly used in mining operations, oil and gas production and mineral water well and borehole development.

Replacement Inflatable Packers and Elements Pty Ltd has a quarter century of experience in high pressure inflatable packer design and construction.

Replacement Inflatable Packers and Elements Pty Ltd' high pressure inflatable packers meet, or exceed the rigid engineering standards demanded by our customers.

Have a query for RIPE? Visit our website www.rripe.com.au

High pressure inflatable packers are simple to deploy, even in remote locations, needing only a crane, gantry or cable tool rig to set in place.

Replacement Inflatable Packers and Elements Pty Ltd's high pressure inflatable packers are readily shipped to South America, North Africa and the Middle East, Australia and South East Asia and throughout Europe.

Inflatable packers from Replacement Inflatable Packers and Elements are purpose engineered to both operate within and withstand extreme deployment pressure.

Therefore applications typically include hydrofracturing, pre-conditioning for block caving, grouting, swaging and permeability testing.

Replacement Inflatable Packers and Elements manufacture many more products than industry leading high pressure inflatable packers.

Our comprehensive product line includes inflatable packers, both standard purpose built, for wireline packer systems, straddle packers, water well drill stem testing packers (dst) and permeability testing packers, as well as packers for acidizing and leaching operations.
