RIPE K-Packers / Telescopic Seals / Blind Packers

RIPE K-Packers

Many different types and sizes of RIPE K packers are manufactured all with flared cone tapers, and weld prep on the bottom for well screens or pipe extensions. Multi rubber ribs form a seal between the casing and the well screen. The rubber is fully vulcanized to the pipe casing then machined to the correct diameter and sealing requirements. The fully vulcanized rubber and the multi ribbing makes for a vast improvement on the age old problem of sealing, that the old k packer once had. RIPE K packers are the perfect aid to the task of joining bore hole casings of differing diameters, water well screens or casing.

Telescopic Seals

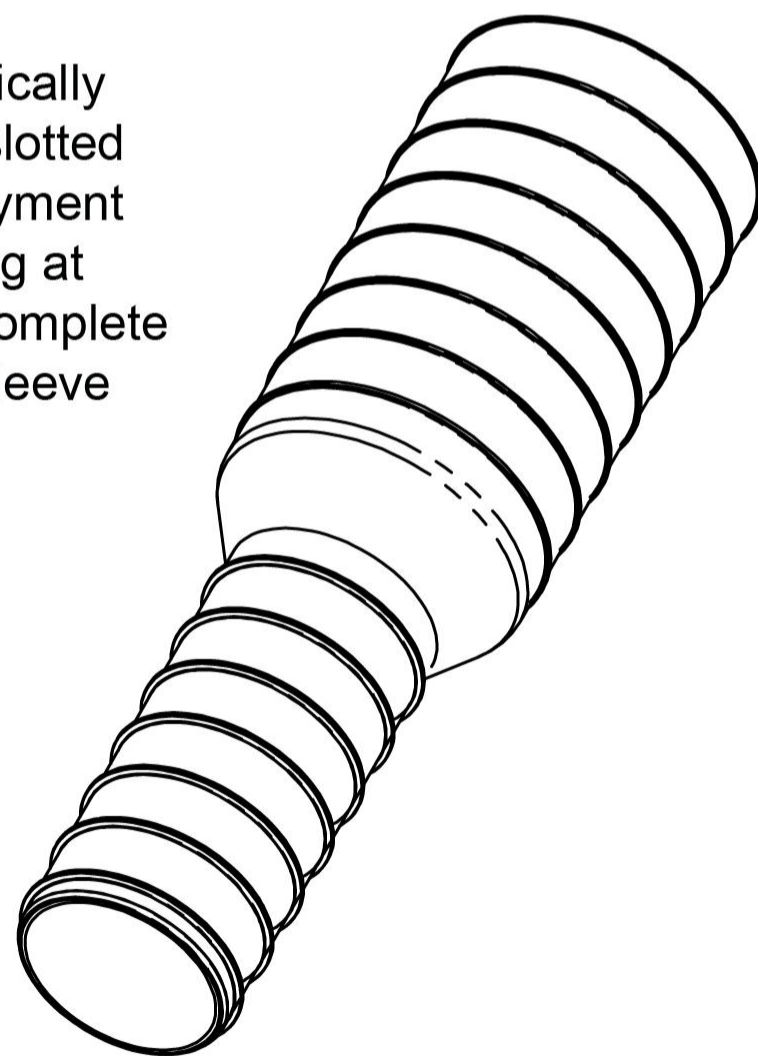

Replacement Inflatable Packers and Elements manufacture on request water well telescopic seal packers to suit transition joints of different diameters.

- Repair of weld joint of different diameters.
- PVC and fibreglass repairs
- Telescopic back seal work best where two different diameters meet.
- All diameter sizes manufactured on request.
- Manufactured to minimize loss of diameter
- Ability to repair joints

Blind Packers

Our Exciting new Blind Packer plug is designed to telescopically seal PVC and fibre glass water well borehole casings and slotted well screens. RIPE's Blind Packer plug permits rapid deployment for fast and easy positioning and retrieval of the packer plug at any time. RIPE's Blind Packers may be ordered fully built complete with stainless -steel grab handle, or supplied as a Packer sleeve alone. Sizes available are 80NB, 100NB 125NB.
