Replacements and Rebuilds

Replacement Inflatable Packers and Elements Pty Ltd provides world class remanufacturing service of worn, damaged or out of specification inflatable packer elements. RIPE's cost effective know-how, results in substantial savings for our customers, without compromising the packer elements structural integrity and hence, packer element performance and longevity.

RIPE provides engineered solutions for specific technical problems. Thus there exists a wide range of inflatable packer types to address these technical problems, such as high pressure cement grouting packers for water well/boreholes, decommissioning grouting valve packers. As well as environment and sampling operations, drill stem testing (DST) packers, water well hydrofracturing packers, standard wireline packer systems and other specific applications. Sizes up to 2meters in Diameter and up to 83MPa (12,000psi).

Replacement Inflatable Packers and Elements Pty Ltd provide inflatable packers, packer systems and associated equipment for such diverse disciplines as water well development, Oil and Gas, environmental and site investigations, hydrology, geotechnical, geothermal testing, civil and mining, onshore and offshore, drilling and tunnelling applications.

Our research and development on the types of products our customers require is on going. Unique problems often require unique solutions and, therefore, at RIPE our custom inflatable packers will continue to be hand made by "those skilled in the arts". All Inflatable packers are tested with NATA certified equipment.

ALL LENGTHS AND DIAMETERS AVAILABLE FOR REPLACEMENT OR REBUILD
